EDUCATION

Manipal Institute of Technology, Bengaluru

B.Tech, Computer Science & Engineering (Data Science) | 2023 - 2027

Relevant Coursework: Machine Learning, Natural Language Processing, Big Data Analytics, Database Management

EXPERIENCE

Intern, Advisory - Intelligent Business Systems

PricewaterhouseCoopers (PwC) | India | Jun 2026 - Present

- Partnered with a Fortune 500 e-commerce client on an agentic-AI opportunity assessment - mapped daily workflows, benchmarked competitors' AI-agent adoption, and pitched a more personalized workflow; documented via flowcharts and Figma wireframes. Client approved all 10+ recommended use cases, prioritizing 3 for Q3 2026.
- Authored 22 SOPs defining functionality, governance rules, and safety guardrails for the client's fintech AI systems; researched India's UPI transaction flow and RBI/NPCI regulatory requirements to keep new customer-service features compliant.

IT Intern

Bharat Heavy Electricals Limited (BHEL) | Bhopal, India | May 2025 - Jun 2025

- Architected a directed weighted graph engine (Python, no external libraries) for infrastructure dependency modeling - BFS, DFS, cycle detection, topological sort, Tarjan's SCC - with 100+ unit tests; optimized the $O(E^2)$ bottleneck from 40s to 0.1s on 10K-50K node graphs (256x speedup), approved by IT leadership.
- Designed a scalable REST API (FastAPI + PostgreSQL) for cascade-failure simulation and criticality scoring; designed the relational data model and implemented async SQLAlchemy 2.0 ORM, JWT/RBAC auth, and Alembic schema migrations; deployed via Docker and GitHub Actions CI/CD across 12+ projects, achieving 94% alignment with domain-expert rankings.

Research Intern - Data & Policy Analysis

Department of Telecommunications, Govt. of India | Bhopal, India | May 2024 - Jun 2024

- Performed a data-driven gap analysis of a national telecom infrastructure program (SQL, Python, Tableau) covering rollout status, budget allocation, and capacity constraints across underserved districts; built dashboards and presentations, clearly communicating technical findings to senior IAS officers.
- Findings were approved by senior officials and used to guide funding decisions; the analysis was also published in a Times of India article covering the scheme's rollout gaps.

PROJECTS

DigiNyaya - AI-Native Multi-Agent Dispute Resolution Platform

diginyaya-frontend.onrender.com | github.com/shivaumsharma/DigiNyaya

- Engineered an event-driven, multi-agent orchestrator coordinating 5 distributed services (FastAPI, SSE streaming, durable cursor state) with confidence-driven escalation to human review; secured with bearer-token auth and IDOR prevention. Tested on 100+ disputes: 78% resolved without escalation, 2.3 min avg. vs. 4 hrs manual.
- Built an end-to-end RAG pipeline over 50+ legal precedents ($F1 = 0.87$, 8% hallucination vs. 34% baseline), validated against an 18-case golden-eval suite (54/54 citations correctly grounded).
- Debugged and root-caused two scoring failures - an unwired jurisdiction/limitation defense detector, and an evaluator crediting a cited legal doctrine with no supporting fact. Correct win/lose calls rose from ~50% to 67%, exact-match from 47% to 59%.
- Built a GitHub Actions CI/CD pipeline: lint, tests, and the golden-eval suite gate every PR; Docker images build and publish to GHCR on merge, with token-usage cost tracking. Selected for the Sarvam AI Startup Program (2026).

FinSight AI - Equity Research & Trading Platform

web-ten-blond-39.vercel.app | github.com/shivaumsharma/FinSight-AI

- Designed and built FinSight AI end-to-end - a TypeScript/Next.js frontend and FastAPI backend - an agentic equity-research and mock trading platform with an LLM planner, tool-calling agents, and a DCF valuation engine; provisioned AWS infrastructure (Elastic Beanstalk, CloudFront, API Gateway, ECR) with Terraform.
- Built a RAG-based research engine integrating third-party market-data and SEC-filing APIs, auto-generating personalized per-stock reports with custom price limits and FinBERT sentiment scoring; cut report time 4x (257s to 65s).
- Built a production backtesting framework with point-in-time data design, scaling the evaluation universe from ~80 to ~1,000 tickers (S&P 500/400/600); model-validation work uncovered structural flaws in baseline accuracy metrics.

LEADERSHIP

President

MAHE Innovation Centre (Overseeing 8 Entrepreneurship Cells) | Bengaluru | Aug 2025 - Present

- Lead a portfolio of 8-9 startups and manage INR 1.5L budget allocation; mentored 12+ founders on product-market fit and go-to-market strategy. Outcomes: INR 4L+ raised, 2 startups selected for IIT Delhi cohort, quarterly demo days attracting 15+ angels/VCs.

TECHNICAL SKILLS

AI & LLM: RAG pipelines, FinBERT, prompt engineering, agentic multi-service orchestration, LLM tool-calling

AI Evaluation & Ops: Golden-eval suites as CI gates, confidence-driven escalation, token-usage/cost tracking, A/B testing

Cloud & DevOps: AWS (Elastic Beanstalk, CloudFront, API Gateway, ECR), Terraform, Docker, GitHub Actions (CI/CD), Git, Postman

Backend & APIs: FastAPI, REST API design, SQLAlchemy, Alembic, JWT/RBAC auth, Server-Sent Events, microservices

Languages & Frontend: Python, Java, JavaScript, TypeScript, SQL, React (Vite, Next.js), HTML, CSS

Databases & Core CS: PostgreSQL, MySQL, ChromaDB (NoSQL/vector) - Data Structures & Algorithms, OOP, System Design, DBMS, Operating Systems
